

THE REAL DEAL ON Climate Change Impacts in New Brunswick

New Brunswick is already experiencing the impacts of climate change and it will get worse.

Warmer.

- ↑ average temperatures
- ↑ extreme heat above 30°C
- ↑ public health impacts (e.g. heat stress)

Wetter.

- ↑ extreme precipitation
- ↑ damage to homes, properties and roads
- ↑ risk of flooding

Stormier.

- ↑ extreme weather
- ↑ power outages
- ↑ damage to homes, power lines and other infrastructure

Rising sea levels.

- ↑ 1m for coastal areas by 2100
- ↑ risk of coastal flooding and erosion
- ↑ loss of natural areas such as dunes, beaches, and wetlands

WE MUST ALL ACT ON CLIMATE CHANGE

Reduce. Prepare. Champion.

5

ways you can
REDUCE
your carbon
footprint

- 1 Reduce your home's energy consumption by purchasing energy efficient appliances and enrolling in Save Energy NB Programs.
- 2 Heat and cool your home with efficient and renewable energy like heat-pumps, geothermal and solar panels.
- 3 Make climate-smart transportation and commuting choices like walking, biking, public transit or carpooling.
- 4 Take advantage of government incentives and purchase a hybrid or electric vehicle and charge your vehicle at home overnight during off-peak hours.
- 5 Reduce your food footprint by purchasing local and remembering to waste less food through meal planning, saving leftovers and composting what's left.

Your provincial government is taking action too!

The Government of New Brunswick is leading action on climate change using the Climate Change Action Plan as its roadmap.

- ✓ Decrease in overall GHG emissions.

- ✓ Energy cost avoidance in schools and hospitals.

- ✓ Incentives for electric vehicle (EV) purchase and increase in EV charging stations.
